# SEBHC JOURNAL

Volume II, Number 8, Page 2

## READER'S LETTERS

Dear Len,

As an advertiser, I appreciate your policy of free ads for vendors of CP/M-compatible products. As you know, I took advantage of your kind offer last fall, two months running. I haven't sent ads since then because:

- 1) It takes time and energy to produce good ad-copy
- 2) Our product mix hasn't changed, so we don't have new products to announce
- 3) New as well as old subscribers have access to JOURNAL back issues in which our products were reviewed and advertised.

As an alternative, would you consider publishing a monthly listing of companies who still promote CP/M, maybe noting some of the products they offer? I wouldn't mind sending you a postcard each month telling you we're still here. [Sure--consider it a new feature! -- ed]

I have not yet received the diskette you sent, the one with a blurb I could post on BBS's here in Chicago. Want to try again? Or maybe you could send a paper copy. I think your policy of free ads for CP/M vendors should draw some response. [OOPS! I think that disc was one I bulk-erased without thinking! A new one is on the way...ed]

Finally, I'd like to compliment Lee Hart for his "who-done-it" article in your January '88 issue. His "How NOT to Fix Delicate, Expensive Equipment" was fun to read, and it passed along some ingenious tips and strategies besides. [Lee will be delighted to read your reaction! -- ed]

The twisted-drive-frame problem he mentioned is one I experienced with my SA-800 8-inch drives. When I started having problems reading the inner tracks, I originally discounted the possibility of a twisted frame. The frames were made of thick steel, and both drives were sitting firmly on top of my IMSAI's case. But when I finally shifted the IMSAI mainframe around, to minimize the possible effect of the swayback in my workbench, the problem disappeared. This was about 8 years ago, and the problem has not recurred.

Thanks again for your lively and useful newsletter.

R LIPSCOMB, Logic Associates, 1433 W Thome, Chicago, IL 60660

[Ray, I've checked over the software files you sent--thank you very much indeed. I've de-librariated that REDIRECT.LBR file--but that's one which will have to wait until after this edition's out the door. It takes me an awful lot of time to put one of these editions together, what with trying to run my analogue computer service business alongside the JOURNAL. But, One Of These Days, Real Soon Now I expect to have someone to help as regular part-time editorial staff and general office assistant. When That Day Arrives, you'll see the JOURNAL getting out the door Much Earlier Than Usual! And I'm Reasonably Sure you'll get the "blurb disc" before you read this. -- ed]

Hi Len!

Thanks for another great issue (Feb '88). Have you given

any thought to making an index to vol. 1 (or from issue 1 to date)? I'd be glad to pay extra for it, or even have part of a regular issue devoted to it. Or perhaps you could offer it on disc as part of one of your disc packages. You could do it as regular ASCII text files, which readers (users) could access with their favorite text editor.

Strum's forthcoming series looks great! Have you considered editing down some of the letters to make room for more tutorials, product evaluations, etc.?

I had a most enjoyable phone chat with Lee Hart yesterday. His new number is (616)-782-3980 (different from what you published). By the time you print this, Lee [told me he] will be caught up on 19/89 SUPERSET orders and ready to immediately fill new orders. Let's get behind him and encourage him. [Right on! See Lee's note elsewhere in this issue. -- ed]

TERRY HALL, Wheaton, IL 60187

[Nice to hear from you Terry. We've taken your advice and put a Cumulative Index in this edition. Have you ever considered writing an article for the JOURNAL? You have a lot of good ideas which I'm sure many readers would greatly appreciate seeing in print (wouldn't you, too?). -- ed]

Hi Len,

Just a quick note to let you know of a couple of problems. First one is that I received two copies of the JOURNAL. [Thanks for notifying us, the problem (one more leftover from that SEBHCMBR.DTB file garble) has been fixed. -- ed]

The other thing concerns ARRAY SOFTWARE who have advertised in your fine [THANKS! -- ed] newsletter. I ordered a copy of MBASIC from them. I got quick service and the product was as advertised (Zenith software in the original cartons). The program worked fine but the problem was that every page in the manual had a big red stamp covering it that said "This manual is for demonstration purposes only and may not be copied or sold. This product may be purchased from your Zenith Data Systems dealer." The manual is still readable but the big red stamp is a little disconcerting. It didn't bother me too much because I already had two copies of the manual I obtained from other sources. I do feel that it might be a good idea to warn your readers about the situation and maybe find out if anyone else has encountered the same problem. Keep up the good work.

BOB OLSON, Hemet CA 92343

[Bob, that's a "dealer demo" package which Zenith forced HECs to buy. I read my copy through a sheet of clear, red plastic which filters out the red overprinting. Try it. -- ed]

Dear Len,

I would like to convey my continuing poor experience with Trionyx Electronics Inc. to my fellow SEBHC JOURNAL's readers.

Back in 1983 or 1984, when the release of the CH8 Universal Floppy Disk Controller was announced, I jumped on it. I think

## LETTERS, Continued

of myself as having a little more than a fair amount of patience, but it took me about 6-1/2 months to build the kit version.

Then I sent off a letter ordering the mass memory board for my H-8 and asked if the CH8 could be used with my H-47 system. They responded promptly and told me that it would work under HDOS. But under CP/M I would have to modify the BIOS.

So far so good... I finally got around to installing my CH8 in January of 1987 but without success. I wrote to Mr. Perry asking for suggestions on trouble shooting this board. He sent me a number of suggestions, with the last stating I should send it back to Trionyx for repair.

After a week or two of following every [pc-board] trace, looking for bad solder joints and triple-checking that the right part is in the correct location, I finally sent the CH8 back to Trionyx (March 1987).

Come June 1987 I sent a SASE to Mr. Perry asking if they recieved my board and how long they estimated its' repair. They returned my SASE to advise me that they did indeed recieve my board and to expect 4-6 weeks' repair time. Well, knowing the past record of Trionyx, I read between the lines and translated that to mean 4-6 MONTHS.

In December of 1987 I sent off a letter asking for the status of my CH8 and placing an order for the Mass Memory Controller card BUT only to make shipment after my CH8 has been repaired. Now its February 1988 and I am still waiting for an answer!

I hope they see this [letter], because I am looking forward to running my H-8 with a memory disk! Although Trionyx has the BEST products for the Heath eight bit world (they even have a connector box to tie an H89 to a 16-bit H8) Trionyx's correspondence with their purchasers is "The PITS"!

I'm wanding this up with a few questions for our readers:

1. Will the Magnolia MicroSystems Winchester card (part #77314) take any 20 Meg drive or MUST it be a CORVUS?
2. Is HDOS 3.0 available on any Mid-Atlantic BBS's?
3. Does Henry Fale's booklet still have H-8 + H-89 stuff? I'm looking for a H8-47 card.

Hope to hear from you soon and Thank You.

ALEX BODNAR JR, C33 Conowingo Circle, Oxford, PA 19363-143

[And thank you, Alex. Now, will our other readers please answer Alex's questions? And how about it, Bill Perry--you folks still in business? If so, send us your 7-inch-wide by 9-inch-high line-copy-only ad for \*FREE\* SEBHC JOURNAL inclusion in an upcoming edition. There're at least thirty-five potential customers among our 300-plus paid-up subscribers (myself included) who Really Need or Want your H-8 products! -- ed]

Dear Lenny,

It just keeps getting better! I've just finished [reading] the February JOURNAL. WOW!

In the FOR YOUR INFORMATION department... While looking

through a surplus catalogue (government, commercial, etc.) I came across a listing for a Zenith CRT. It was described as a 12-inch diagonal green video display, p/o Heath/Zenith H/Z100 microcomputer. It includes an MN1210P31AU CRT and printed-circuit board with adjustable focus, brightness, vert-size and width. It is NEW with no frame or AC supply and the cost is \$12.95. This seems like a good deal for a spare CRT and parts for the '100. [Too bad this tube is too long for our beloved H19/89s! -- ed]

My hat is off to Mr. Henry Fale of QUICKDATA, Inc. After searching for almost 2 years for a copy of MBASIC for HDOS, I found Quikdata, Inc. had one. Although there wasn't any documentation with it, I'm sure I can find it somewhere. Perhaps one of the JOURNAL's readers will have a copy they'd like to sell? Anyway, I can now check out those programs on your HDOS "Programmer's CARE Package" Disc #0 which use MBASIC.

Speaking of discs. Has there been an upgrade to your CP/M GAME DISC #0? While thumbing through Volume II, #4, I read about a program called WOODCUTS.BAS (pp2 & 4). Since I sometimes do a little woodworking I though this program may be of help. I checked my GAME DISC #0 copy and didn't find WOODCUTS on it. If the JOURNAL has an update which includes this program, please let me know so I can send in my disc for the update.

Keep the good "stuff" coming. And a SEBHC JOURNAL BBS sounds good to me. I believe it would nicely complement the JOURNAL!

ALLIE C LINGO, P.P. Box 118, Dierks, AR 71833-0118

[Congrats on your finding a "legal" copy of MBASIC 4.82! If you can't get a "surplus" copy of the manual, I know somebody who'll slip you an "illegal" photocopy of it for a nickel/page or so. What with Heath (and Zenith) abandoning one of their more-popular product lines, this may eventually become the only way any of us can keep our still-working machines going! There probably are a gang of "Legal MENSAs" out there who are ready to lean back in their leather-clad swivel chairs to tell us about all the penalties we may accumulate by ignoring H/Z's copyright notices, but H/Z still has not made any public response to Kirk Thompson's letters! If H/Z continues to ignore us we can only interpret their silence as tacit approval to go ahead and "pirate" anything we can! Are you reading us, H/Z? Now, about your HDOS "Programmer's CARE Package" Disc #0 question: Yes, we've revised this disc and have created a companion disc, the "SEBHC JOURNAL HDOS GAMES DISC #1". Both discs sell for \$3.00/ea, soft-sector, \$3.66/ea, hard-sector. (See our "NEW DISCS DIRECTORY" elsewhere in this issue.) If you or any other reader wants a free upgrade of HDOS Disc #0, send it to us with a US \$1 stamp to cover (about half of the) return cost. Or, if you want to get the upgrade AND our new HDOS GAMES DISC #1, forget the \$1 stamp and include your cheque to cover GAMES DISC #1 price and we'll upgrade your original disc FREE and send you BOTH discs in the same mailer. How's that for a real, honest-to-goodness bargain?! -- ed]

## LETTERS, Continued

Dear Mr. Geisler:

Please find enclosed a check for renewal of my subscription.

And thank you for printing my article on ZCPR3 in II:7. I hope your readers found it enjoyable and of some value. If you would like more on the subject of ZCPR3 later, I shall be happy to send another report. [Please do! -- ed]

I have been meaning to write an article on yet another speedup modification for the H/289A. This one a friend and I built about six years ago. Its' claim to fame is that software patches or changes need not be made (at least, the only program I couldn't run at 4Mc/S was USCD Pascal using p-System) of all the software I've tried. This modification DOES NOT require cutting any printed-circuit traces. Only a toggle switch, costing less than \$10 and mounted at the computer's rear, is needed to toggle the system between two and 4Mc/S. Installation shouldn't take more than three hours, even if you have ten thumbs and no fingers! And if you are running at 4Mc/S, the system automatically switches to 2Mc/S when it accesses any hard-sector drive.

I think you are providing a great service to those of us who feel [Don't you mean "know"?! -- ed] that the eight-bit world is still alive and well. Keep up the good work, and thanks.

RON EGGEMEYER, 2209 N 17th Ave, Phoenix, AZ 85007

[Ron, check your mailing label on this edition--you're in for a nice surprise! Surely by now you realise that what keeps us at the JOURNAL going is the steady flow of "how-2" or "Gee Whiz! Look What I Did--Now You Can Do It Too!" articles flowing in from enthusiasts such as yourself. New information is the incentive keeping our subscribers happy and the fuel which keeps their machines Up And Running! -- ed]

Dear Lenny,

It was great talking with you yesterday. Hope all is going well in the "Midwest".

Thanks for holding those H8 memory cards for me. [You are quite welcome! -- ed] You'll find enclosed an IMO for US \$79 for 64k of memory cards and one year's extension to my membership/subscription.

What's happening up here [in B.C.]? Lots! My main machine is an H89A with the D-G Electronics S89 CPU board, H17 inboard dual Z37s outboard, and an MX80A running off the serial port. I also have the FBE Spooldisk installed. Quite a lot to cart around when working out of town as I am now. My other H89A--a "stock" machine with 3 H17s (and 2 Z47s as soon as I get some other things done) and a 3-port serial card with nothing attached--sits at home on my mother's desk running Roots/89. In the "computer room" downstairs in various states of disassembly are a Z25 printer, an unbuilt H19A, two H8s, sundry modems, switches, etc. I should also mention the H11A for which I have only UCSD Pascal. Anyone out there have a spare copy of the Heath OS (HT-11)??

Those [H8 memory] cards are for me--or a new acquaintance who picked up a working H8 at a swap meet although it has just the CPU and 8k [of memory installed]. I have on hand several H8-4 serial cards, a few H8-5 cassette boards, and an undetermined quantity of surplus memory cards for the H8. Open to offers. Possibly swap for an H8 H17 controller (also willing to buy one).

My current projects are as follows:

- Using an H8 as a programmable serial switcher - the boxes are fine, but with all the possibilities which I have. . .
- Programming an H8 or H89A as a security system incorporating the now-discontinued BSR X10 serial interface. . .
- Getting my Prometheus 5 on-line. This is an ancient 5.25-inch hard disk built for the TRS80 Model I, I'm told. The interface looks like a Western Digital card such as SigmaSoft uses on their system.
- Adding computerized detection and signalling to my model railway, similar to the CMRI interface described in "Model Railroader" magazine last year.
- Becoming more fluent in Assembly Language as well as BASIC, FORTRAN, and COBOL. Getting to know UCSD PASCAL.

I do have one problem to report. Perhaps you can help, Lenny. My main machine will not print when running CP/M at 4Mc/S using S89BIOS Version 2.2.10. The machine works fine with CP/M 2.2.04 or 2.2.10 at 2Mc/S, and under HDOS 2.0 at both speeds. Any suggestions?

Keep up your great work on the JOURNAL. Every issue is exciting. Keep those eight-bit machines humming, too. Mine do, all the time.

BRIAL L DOBBIN, 4808 Trafalgar Street, Vancouver, B.C., Canada, V6L 2M9

[Hey Brian! Thanks for the International Money Order! Your subscription just grew another year. And now I've got to dig out those three memory boards, pack 'em, take 'em across the boarder to Windsor and mail them parcel-post. (If I send that large a package by U.S. Snail it may never get there--especially if it has a customs declaration on it!) As for your "don't print" problem, do you mean you can't send stuff out to LPT: or LST:? I don't have that kind of trouble with my D-G S89-equipped H89A, just the inboard 40trk double-sided A: drive crashing boot discs every now and then! I do sometimes have problems with the cache memory under HDOS 2.0 when doing a Hoyle & Hoyle QUERY!2 SORT routine--then whole gobs of data just vanish into the elsewhere, never to be seen again by mortal eye. How about some of you other SEBHCers getting in touch with Brian, Right Away?! -- ed]

NTED. . . HELP WANTED. . . HELP WANTED. . . HELP WANTED. . .

I need to contact anyone who has interfaced an H89 with a ham radio using the Heath HD-3030 terminal interface. How do I connect the various hardware components? Jared Freeman, 600 Ginger Tr, Lake Jurich, IL 60047--312-438-0513 after 6pm CST.

600 Ginger Trail, Lake Zurich, IL 60047 Phone 312-438-0513,  
after 6pm CST.

=====

Dear Lenny,

I have moved from my temporary address in Kalamazoo. The new address for me (and TMSI) is:

TMSI c/o Lee Hart  
28612 Middle Crossing Road  
Dowagiac, MI 49047  
Phone 616-782-3980

By the way, I have not received the February SEBHC JOURNAL yet. Has it been sent? [Yes, by bulk mail, but to be quite sure we sent another one first class to your new address immediately on receiving this note. -- ed]

Regarding the letter from Mr. Ridlon in the Dec 87 JOURNAL (printed contrary to your published policy of notifying the vendor first), I STILL have no record of any order from him, he has not contacted me, and he has not answered my letter. You should print a retraction since [to the best of my knowledge] no such order exists.

Regarding the letter from Mr. McFarlane [which] you published in the Jan 88 JOURNAL, I wrote him in mid-January asking for a copy of his order, since I hadn't received anything from my [former] office help on it. On 25 January I received the office records from my old office [in Ann Arbor] and Mr. McFarlane's order was in the delivered stuff. Mr. McFarlane also sent me a copy of his check and order. My old office records verify that his order and check were received in Ann Arbor. I have therefor shipped the Superset to him.

LEE HART for TMSI, Dowagiac, MI 49047

[Lee, thanks for the address update. We called Mr. Ridlon to find out what happened and he said that you sent him a letter explaining why his order hadn't yet been processed. He also told me that he is going to mail you a charge slip photocopy to prove he'd actually ordered a Superset upgrade for his H19 terminal. I hope this information will blow away the clouds of misunderstanding and ill will... And good luck in your new location! Keep us informed. -- ed]

Dear Mr. Geisler:

In the Jan '88 issue of the JOURNAL, J D Miner asks for a source of hard-sectored discs. When I first got my H89, hard sectored discs were expensive so I purchased a leather hole punch (US GENERAL, 100 Commercial St, Plainview, NY 11803, stock #48785--\$4.99) and made a template from an original 10-sectored disc. Since then, I've purchased soft-sectored discs whenever they are on sale for five to six bucks a box and make my own holes. To date I haven't had any problems

reading these home-made hard sectors. [Great idea! Always though one could do it that way, but never had enough gumption to try it myself. -- ed]

Now, in response to D Gilbertson's question (Feb '88), I purchased the Herby board with 256k onboard RAM and expanded it to 512k. Installation was easy, and when I ran into trouble and called TD Engineering I got immediate help. The utility files which came with the board are excellent and the board works great! [Good news, indeed! -- ed]

I do have a question: I received the replacement for that defective Game Disc #0 and have shipped back the bad one. Have you received it? [Yep, found out it had been partially erased after reading it with SZAP! What's with those blokes at the Post Office? -- ed]

NICOLAS PINILLA, 1530 Commonwealth Ave, Bronx, NY 10460

[See, your letter proves that us old-time H/Z 8-bit types are resourceful and ingenious! Keep up the good work. Would you --or someone--take a few step-by-step photos of how you make those hard-sector discs? I think the rest of our hard-sector users would appreciate this kind of hands-on information--I would! We'd be delighted to run your story and pictures in the SEBHC JOURNAL--and of course you'll get a subscription extension as honorarium. Now that "no-name" soft-sector discs are available in bulk for twenty-five cents each, this technique certainly will help cut costs in keeping our equipment up & running. -- ed]

Dear Lennie,

I bought Don Deck's H1000 because I have day-dreamed over the ads for that board for as long as I've seen the ads, and I'm a dyed-in-the-wool H89er! Even though I've had my H89A for six years, I am just now beginning to acquire real programming skills and learn how the computer's guts work.

I don't fancy retracing my learning steps on a newer generation computer--not at my present absorption rate, that is! I really didn't begin to make progress until I acquired Borland's Turbo PASCAL when buying my second (of three) H89s. I heartily recommend this language to all, 'though you should also get "Mastering Turbo PASCAL" by Tom Swan to help you painlessly learn and acquire proficiency in the language.

In my own case I have been able to write a SCREEN program in Turbo PASCAL which you might consider for inclusion in the SEBHC JOURNAL's budding library. Here's what it does:

- Draws on the screen in normal/reverse graphics using the shifted keypad to position the cursor (including diagonal) with a 25th line help [display].
- Saves screen to memory upon leaving DRAW mode or within DRAW using Alternate Keypad (a stroke of the RED key).
- Saves memory to disc or calls File to memory.
- Prints screen to MPI printer in normal/reverse graphics (doesn't yet intermingle ASCII).

# SEBHC JOURNAL

Volume II, Number 8, Page 6

## CUMULATIVE INDEX/Table of Contents

SEBHC JOURNAL, Volume One		#5 - December 1986	
August, 1986 through July, 1987		Letters from subscribers	2
Table of Contents By Issue		Graphics "Easy as PIE" -- George Ewing	pp3-8
#1 - August, 1986 -- Premier Edition		Another fine "how-2" tutorial. Who needs Ed-A-Sketch? Lavishly illustrated for novice or skeptical oldtimer alike.	
The Computer Novice's Choice -- Lee Hart	pp3-7	BOOK on a HARD-SECTOR DISK, or On a Clear Disc	
Fact as fiction; satirical comparsion of ibm's peecee with a standard H/Z-89 (the winner!).		You Can See forever -- Lee Hart	pp10-13
Letters from subscribers	12	Intimate secrets of how disc drives and discs work and data is stored on hard-sector discs.	
H89 Scrapbook -- Dan Jerome	12	HARDWARE REVIEW -- GRAPHICS-PLUS GP-19 -- Lee Hart	pp16-20
Practical Notes on incorporating several different H/Z-89 clock speedup modifications.		A very revealing look at how Northwest Digital's add-on Terminal Graphics Card enhances the H/Z-19 and H/Z-29 terminals plus the '89 and '90. Includes comparisons with Sigma-Soft and Codonics products.

PROGRAMMER TIPS (MBASIC Debugging Techniques)	pp13-14		

## LETTERS Concluded & NEW-DISC NEWS

e. Uses Alternate Keypad for several functions

I will include the complete source code and a compiled version and any instructions for modifying it that I can get to between now and then. The biggest drawback is that each printer would need its' own routine to shift into graphics mode, and a complete library of Heath graphics characters built in similar to the one I did for the MPI-99.

Now that I'm the owner of an H1000, I'm interested in the success/failure ratio of other H1000 owners, and would like to see some kind of H1000 special interest group initiated. [I rather fancy the name "SIGH-1k" -- ed] It would be quite nice to have a running correspondence with other owners of H-1000s to avoid the trial and error which goes with wondering what will work, what won't, and why [it does or doesn't]. For instance, I've just bought MIX C (for MS-DOS) language, which I'm trying to install--with only limited success--on my '1000. The whole package--Editor, Compiler, and fancy Debugger--only cost \$39.95. If I can't get it up and running, it looks so good that I'll probably order the CP/M version. I'm sure that MIX C (which claims 100% full C capability) WILL install on an H89/H90 because it is [advertised as] one of the standard installation options (I saw it

in "Computer Shopper").

Obviously, if I still have an MPI-99 printer, I don't chase after the "Lastest and Greatest" [hardware], and the fact that I went to such great lengths to build my own graphics driver over the course of several years identifies me as pretty cheap. [Not to ME, it don't! You are simply conservative, ingenious, and THRIFTY! -- ed] I don't mind spending money on my computer, but by golly, I'll get my money's worth out of it before I chuck it! [You & me both, chum! -- ed] I've just this week finally ordered a 2400-baud modem after five years of 300 baud. So I intend to get used to this H1000, and continue using my other Magnolia-carded H89A. I'll probably continue subscribing to the SEBHC JOURNAL as long as you continue printing it.

ED THOMAS, 4108 Lees Corner Road, Chantilly, VA 22021

[Hey, Eddy! Don't let the clowns bug ya! We've got a long, L-O-O-O-N-G way to travel before our grey boxes gather any scrap-heap potential. Read R K Strum's article--he proves it is cheap & easy to keep your H/Z 8-bit machine humming along! Meanwhile, I'm eagerly awaiting your software "baby". -- ed]

Disk C: #0 - Label: SEBHC JOURNAL CP/M-80 GAME DISC #0

# SEBHC JOURNAL

Volume II, Number 8, Page 6a

## The JOURNAL's CP/M & HDOS DISC-CONTENTS Described Briefly (See Order Blank on page 15)

### CP/M GAME DISC #0 \*\*\*\*\*

o ACES.BAS (Lee Hart)--World War I aerial dogfight game. \*\*\*\*  
o CLS.COM (Staff)--Clears screen easier than SHIFT-CTRL-ERASE  
finger-stretching exercise! \*\*\*\*\*  
o COPY.COM (from REMark)--Easier to use and smaller than PIP,  
moves files (incl \$SYS files) w/o 1st changing flags. \*\*\*\*\*  
o ERRORS.COM (fm REMark)--Checks for & lists soft disc errors  
since last warm boot. Very handy if drives are suspected. \*\*  
o FOGINDEX.BAS (CodeWorks) Also on HDOS disc, below. \*\*\*\*  
o LABEL.ASM (Staff)--Label your CP/M boot discs and use AUTO  
COMMAND to display on either cold or warm boot--or both. \*\*\*  
o NEWFBAD.COM (Pub domain) Non-destructive FINDBAD program to  
run after FORMAT. Locks out bad sectors on active discs. \*\*\*  
o NEWPIP.COM, PIPHELP.ASM, 'HEX (Lee Hart)--Standard PIP but  
with a help file. See READTHIS.1ST file. \*\*\*\*\*  
o RENAME.COM (fm REMark)--Easier to use than resident REN  
command because it uses English-language command form. \*\*\*\*\*  
o RENUMBER.BAS (CodeWorks)--Goes \*INSIDE\* MBASIC to renumber  
chosen blocks of lines. Serious worker's "Must" utility!\*\*\*\*  
o SETMX.xxx (from old HUG CompuServe library)--Changes Epson  
printer fonts from computer keyboard. "Must" utility. \*\*\*\*  
o WOODCUTS.BAS (CodeWorks)--Computes and prints scrapless cut  
guide for serious, economy-minded woodworkers. \*\*\*\*  
o XDIR.COM (GEnie download)--Lists all files on a disc in 4-  
column alpha display, displays user areas, file status, file  
space used & remaining free space. "Help" included.  
o XERA.COM (from REMark) Easier use than STAT plus ERA, has  
prompt menu, help file, hard to make errors. "Must" utility.  
o ZDIR.COM--short version of XDIR.COM, only alpha sorts files  
starting with 1st letter (or number) in filename AND exten-  
sion, shows occupied and remaining space.

### HDOS 2.0 "Programmer's CARE Package" Disc #0 \*\*\*\*\*

o BCH.DVD--Simplified HDOS version of HUG's KEYMAP.COM. Use  
with Benton Harbor BASIC as BC.DVD One-key cmd word entry.  
o BCM.DVD--MBASIC version. Both programs courtesy of Maurice  
Desmeules of Montreal, Quebec, Canada HUG. \*\*\*\*\*  
o BH2MBAS.BAS--Converts BHBASIC programs to MBASIC format and  
changes some BH cmds to MBASIC version. Dr Wm Campbell \*\*\*\*\*  
o BHFILES.BHB--BH BASIC program lets you read directories  
without exiting BASIC. Duplicates MBASIC "FILES". From REM.  
o CHENBOOK.BAS--Computer version of regular check-book reg-  
ister in MBASIC 4.82. Can work under CP/M. From REM. \*\*\*\*  
o DEVICES.ABS--Checks and displays devices and status on the  
booted system disc. Handy if your own memory's weak. \*\*\*\*\*  
o DISASSEM.ABS--(Old CompuServe HUG download) Works something  
like ASM, in reverse. No document file, test it on a "junk"  
file and let us know how to use it! ?????  
o EXTRACT.BAS--"CodeWorks" program, self-prompting, extracts  
stuff from any ASCII file. Must use to appreciate! \*\*\*\*\*  
o FOGINDEX.BAS--Fine "CodeWorks" program helps you write bet-

ter English; self prompting, run \*before\* submitting anything  
to a publisher. \*\*\*  
o HC.ABS--(Old CompuServe HUG download) Sends H19 or H/289/-  
90 screen to LP:. HC.DOC file has instructions. \*\*  
o MBSORT.ASM--(From pre-BH CIS HUG88 library.) When assem-  
bled can be loaded and called from a program. See .DOC file.  
o NEWLABEL.ABS--Pat Swayne's "LABEL.ASM" from REMark with ad-  
ded help file for easier use. Re-labels discs with up to 240  
characters/ spaces. (INIT only allows 65!) \*\*\*\*\*  
o OUTLINE.BAS--"CodeWorks" MBASIC programmer's utility, self-  
prompting, helps you write programs & prints results. \*\*\*\*  
o RENUMBER.BHB--REMark program rennumbers any BHBASIC program  
SAVED in standard ASCII format. Similar to MBASIC RENUM  
function. Self prompting. "Must" BHB utility. \*\*\*\*\*  
o SD.ABS, SD.DOC--(CIS HUG88) Similar to above CP/M XDIR.COM.  
Short form prints sorted directory showing space used, flags  
& space left. Long form shows file creation, last revision  
dates. Has cryptic help file. \*\*\*\*\*  
o SEARCH.BAS--"CodeWorks" MBASIC utility, looks for a partic-  
ular item in an ASCII program file. Self prompting, valuable  
programmer's timesaving tool. Sends output to LP:. \*\*\*\*\*  
o SYSCHECK.ABS--(From Maurice Desmeules) prints full-screen  
graphics display of disc statistics per HDOS 1.6's STAT  
command. SYSERR.ABS is "short form" of this utility. \*\*\*\*  
o YNKEYS.BAS--From REMark. Lets you do more with MBASIC  
4.82. Appended to or MERGE in any MBASIC program. \*\*

### HDOS 2.0 GAMES DISC #1 \*\*\*\*\*

o BANDITO.BHB (Staff)--Cassette BAS game re-done in BHBASIC.  
Simulates one-arm bandit. Will run in MBASIC w/few changes.  
ASCII file. Jazz up "fruits" display & it's a winner! \*\*\*\*\*  
o BH2MBAS.BAS (REMark)--Doc Campbell's utility converts BH-  
BASIC program to MBASIC format. Self-prompting. \*\*\*\*\*  
o CHESS.ABS (Netherlands HUG)--Stand-alone SARGON-type game.  
Instructions are in CHESS.DOC. Several play levels. \*\*\*\*\*  
o HEADLINE.BAS (Staff)--MBASIC random sentence generator dup-  
"National Enquirer" headline style, language. FUN-NY! \*\*\*\*\*  
o INSULTS.BAS, INSULTS1.BAS (REM w/Staff embellishments)--An-  
other FUNNY language program. More work possible. \*\*\*  
o LETTRES.BAS (Maurice Desmeules/Montreal HUG)--A neat FRENCH  
Language w/graphics program. Can you improve it? \*\*\*\*\*  
o MICTALK.BAS (Microcomputing/Staff)--More funny stuff! Gen-  
erates often hysterical simple declarative sentences. \*\*\*\*\*  
o NOEL.BAS (REMark/M Desmeules)--Nifty version of J. McGraw's  
animated Christmas graphics program. \*\*\*\*\*  
o NUMBERS.BAS (REM/Staff)--Computer-Aided Instruction graphic  
program teaches kids simple math. Can be improved. \*\*\*  
o WOODCUTS.BAS (CodeWorks)--Cabinet-maker's friend. Elimin-  
ates tedious hand-layouts of material cuts for minimum waste.

NOTE: Above discs in ssdd hard-sector or ssdd soft-sector  
format. See prices on order blank, page 15. Improve any of  
these programs, send us the new code & maybe earn royalties!

## INDEX/Table of Contents, Cont'd

#7 - February 1987, continued		
FOR ALL 8-BIT COMPUTER CHEFS -- Staff effort	12	CP/M DDT crash-recovery technique which really works!
Two gourmet recipes: Old-fashioned sour-dough bread and Press Secretary Jim Brady's Genuine Chili Con Carne (sans frijoles). Serves a LOT of folks!		MISCELLANY -- Staff effort 4
Subscribers WANT ADS	13	Tandy 100 SIG on GENie, The Source, CIS; more JOURNAL disc news, Transmit-Screen routine.
SOFTWARE REVIEW -- L E Geisler	pp15-16	AUTO KEY REPEAT for the H19/89 -- Jim Holt pp7-9
Spectre Technologies' new H/2-19,'89 screen graphics utility/toolkit package. Allows the user to create graphic screens of almost unlimited complexity and display them as either static images or as animated slide shows. Also permits saving screens to various EPSON printers. Conclusion is that it's a very good package at a ridiculously-low price.		Good technical article, complete with schematic diagram, parts list & "How 2" do it.
YET ANOTHER ASSEMBLY-LANGUAGE UTILITY - Sigismund Nebbish p17		SOFT-SECTOR DISC CONTROLLERS FOR H-89 - George Ewing pp12-15
A CP/M program which lets you put a LABEL on your boot disc which is displayed upon cold bootup.		Thorough rundown of various available plug-in and run soft-sector disc controllers. Describes TMSI 289-37 Heath controller, CDR's FDC880H and Magnolia's XM-316. Very good reference material!
#8 - March 1987		#11 June (not July!) 1987
Letters from subscribers	pp2-3	FROM NOVICE TO "EXPERT USER" -- John S Crouch pp3-5
"HOK BOY--SOMETHING WENT WRONG!" -- Staff 3		Personal history of a Heath Computerist
Corrections for typos which occurred in previous assembly-language utilities listings.		CP/M SHAREWARE & OTHER GOODIES -- Wm H DuBay pp7-9
RENUMBER.BAS -- A Selective BASIC Renumber Program -- pp5-10		"Must" reading!
Copied from CodeWorks Magazine and modified to run under CP/M MBASIC. Permits renumbering a block of lines WITHIN any MBASIC program which was saved as an ASCII file. A very useful bit of software, gets around an annoying MBASIC omission. Complete listing. Modified it runs fine under HDOS MBASIC Ver 4.82.		A Very Useful MBASIC Download From "Codeworks" Magazine 9
DIVINE PROFIT -- David M Poppe, Arizona Business Gazette 13		The poor man's text formatter, PLIST.BAS, a CP/M utility which can easily be modified for HDOS.
A little computer humor makes a day go better!		#12 July 1987
ADDENDUM/CORRECTION, ACE of ACES Listing (nos 6, 7) 14		Letters from subscribers pp2-5
Expands program to print a help menu at start of game. (Included in program on CP/M GD#0.)		COLUMNS.COM - A Review by Al Brengle (Reprint) pp6-8
Letters from subscribers, concluded 15		Thorough description of this very useful text formatting program. Newsletter publishers need it!
#9 - April 1987		CP/M TIPS from "AO> Newsletter" pp8-9
Letters from subscribers	pp2-4	Five very useful hardware and software tips.
A Challenge! -- Call for articles from subscribers 4		THE FUTURE FROM TEN YEARS AGO -- Staff effort pp9-10
DISC & MISCELLANEOUS NEWS 4		Have prophecies come true? If so, which, and by how much?
Disc directories of HDOS 2.0 "Programmer's CARE Package" Disc #0, and CP/M-80 SEBHC JOURNAL Game Disc #0. Includes formats & prices.		VOLUME II
A NEW PORTABLE H-89?! -- Lee Hart pp13-16		August 1987 through March 1988
Rundown on RS Model 100 portable computer & how 2 make it work with your H/2 8-bit machine.		#1 August 1987
#10 MAY (not June!) 1987		Letters from subscribers pp2-5
Letters from subscribers 2		A HANDY PRINTER UTILITY -- Mike Brown (on CIS-HUGBB) pp8-10
MY LIFE WITH THE H-8 -- William H DuBay pp2-3		Titled SETMX.ASM, program gives access to most-used Epson (and compatible) MX-series printer functions.
RECOVERING TEXT LOST IN MEMORY 3		#2 September 1987
		Member's correspondence pp2-6
		An HDOS ASSEMBLY-LANGUAGE UTILITY -- Bernard Helms pp6-8
		This is a handy PROLOGUE.SYS-type utility which prints a reminder list on screen when you first boot up. Great for forgetful folks!
		HUGCON-VI Observations -- by Your Editor p9
		A REVIEW -- Brief Note About COLUMNS.COM -- by Your Editor p9
		ADDITIONAL CORRESPONDENCE pp11-12
		EDITOR'S REQUEST TO SUBSCRIBERS (Send H/2DS a Letter!) p12
		#3 October 1987
		SOFTWARE ARTICLE - Extending Useful Lifetime of CP/M OS pp2-4

# SEBHC JOURNAL

Volume II, Number 8, Page 8

## INDEX/Table of Contents Finis

A "PORTABLE" CP/M COMPILER -- Tim Brengle	pp5-8	discs and try it after reading this step-by-step instruction set. Results guaranteed to satisfy!	
Part One of a series. How to use computer games as a model for writing your own compiler. MUST reading!		READER'S LETTERS, Continued	p11
LETTERS	pp8-10	A Really, REALLY "CHEAP" Printer -- Lee Hart	p12
WANT ADS	p10	Lee needed a printer desperately and bought one for \$29.95... Here's what he bought--a bargain!	
SURVEY RESULTS	p10	THE LIGHTER SIDE -- A little humor never hurt anyone!	p12
A simple majority of subscribers say, "If the JOURNAL ain't broke, don't fix it!"		HDOS or CP/M MBASIC-80 CHECKS.BAS -- Ray Dotson	p13
TUTORIAL IN "C" -- Darrel C Pelan	p11	A nifty check-writing subroutine.	
First in a series on programming in C language. Absolutely MUST reading!		#6 January 1988	
CP/M MBASIC PROGRAM LISTING -- Gary Melander	pp12 & 14	READER'S LETTERS	pp2-9
A loan payments calculator, VERY handy if you're about to buy a house or car and are not good with "high finance". Prints a schedule of payments.		WANT ADS	pp9-10
WANT ADS, FOR SALE, COMING ATTRACTIONS	p14	DISC-DRIVE REPAIR -- Lee Hart	pp10-11
#4 November 1987		How NOT to Fix Delicate Expensive Equipment	
CHUGCON '87 NOTES -- Staff effort	p2	WANT AD, LIGHTEN UP	p11
LETTERS	pp2-6	"PORTABLE" CP/M COMPILER, Part 5 (4!) by Tim Brengle	pp12-14
"PORTABLE" CP/M COMPILER -- Part Two -- Tim Brengle	pp7-9	Theory & Practice: Computer language versus Plain English	
Lavishly illustrated with examples of how to write your own compiler. Answers questions "What Is a Compiler?" and "What is an Interpreter?"		MORE Letters	p14
TUTORIAL IN "C" -- Part Two -- Darrell Pelan	p10	TUTORIAL IN "C", Part 4 -- Darrel Pelan	p15
Explains scanf and printf and gives a working "C" Checksum Calculator utility listing.		Last of this series discusses C/80, gives a Test listing. (Ad this to your How-2 collection!)	
A HARDWARE REVIEW (A Cheap Daisy Wheel Printer)	p11	NOTES From Here and There -- Staff effort	p16
Lee Hart lets us in on how to make a \$39.95 mail-order printer work with anybody's H/2 8-bit computer.		#7 February 1988	
SOFTWARE NOTES -- Software we really appreciate	pp11-12	SAD 8-BIT NEWS -- Technical Micro Systems, Inc.	p2
The JOURNAL staff's favorite software used every day around our office.		is gone, replaced by solely-owned proprietorship	
#5 December 1987		READER'S LETTERS	pp2-5
Found - Cure for "Credit Card Blues" -- Staff research	p2	Gary Melander writes & illustrates installation of Pat Swayne's Z80 piggyback mod in H8 with H8-37 card	
Too many subscribers feel they've bought a "pig in a poke" with a credit card. This item tells you how to get your money back. Copy it and hang it over your telephone!		MISC. NEWS	p6
LETTERS from our Readers	pp3-5	FOR SALE/WANT ADS	p6
"PORTABLE" CP/M COMPILER -- Part Three -- Tim Brengle	pp6-8	EIGHT BIT STUFF OF GREAT VALUE -- Ron Eggemeyer	pp7-8
More "insider information" on how to write your own compiler using computer gaming techniques. Really GREAT stuff!		Revealing rundown of ZCPR-3 You Just Have To Read!	
WANT ADS, NOTICES	p8	"PORTABLE" CP/M COMPILER, Part 6 (5!) by Tim Brengle	pp9-10
TUTORIAL IN "C" -- Darrell Pelan	p9	Concluding article in this very informative series. Includes a general description of Tim's ADL package and how to order it.	
If you have a copy of Software Toolworks' C/80, dig it out and try these ideas! Lists a DPB Reader.		.ASM, HDOS & CP/M -- Frank Cepulkowski	pp10-13
HOW-2-USE HEATH'S MAKEBIOS -- Ross Tobin	pp10-11	Three Assembly-language listings of useful utilities in a letter.	
If you've tried to use the stock MAKEBIOS.COM files and gave up in disgust, get out your distribution		JUST-RECEIVED CORRESPONDENCE -- from Gary Melander	pp12-13
		Includes a "quickie" version of STATECAP.BAS for HDOS or CP/M MBASIC. Worth the time & trouble to key in!	
		COMING ATTRACTIONS. . .	p14
		INTRODUCTION to "EIGHT BIT SURVIVAL IN A PEESEE WORLD" by R. Kenneth Strum outlines a series of important data he'll be writing about in our next edition.	
		"UNCLASSIFIED" WANT ADS	p14
		SEBHC JOURNAL's LETTERS POLICY and DISCLAIMER statements	p15

TRADE-INS and ODD'n'ENDS

Upgrade your '89 NOW while  
8-bit products are still available!

## MAGNOLIA MICROSYSTEMS

### PRINTERS

TI810 "R/O Package" Printer was over \$2000 new, now just \$450.  
15" carriage, 150 cps, commercial duty printer, serial interface

Okidata Microline 82A Printer now just \$135.  
8.5" carriage, 120 cps, serial and parallel interfaces. Add \$25 for tractor

Qume Sprint 5/55 KSR over \$3000 new, now just \$395.  
15" daisy-wheel printer, 55 cps, serial interface. Add \$100 for tractor

Single Sheet Feeder for Qume Sprint 5 series over \$1000 retail, now just \$200  
BRAND NEW IN BOX. Only \$150 if purchased with above printer!

### DISK DRIVES

Dual 8" Shugart SA800 Single Sided drives now just \$195.  
In case, with power supply. Use with MMS 316 Controller or on Z110/120

Dual 8" Tandon TM848 Double Sided drives now just \$395.  
In case, with power supply. Use with MMS 316 Controller or on Z110/120

Dual 5-1/4" Single Sided drives now just \$125.  
In case, with power supply. Use with either Hard- or Soft-sectored controller

Dual 5-1/4" Double Sided 80-track drives now just \$195.  
In case, with power supply. Use with MMS 316 or Z89-37 controller

30 MByte Winchester Subsystem reduced to just \$645.  
In case, with power supply, includes XM320 I/O package with CP/M 2.2

### OTHER STUFF

Serial I/O boards for Z89 overstock our '317 board \$35.  
2 of 3 ports populated, without DB25 connector cables

Zenith Z89-11 Serial/Parallel I/O board as-is \$25.  
1 standard (async) serial, 1 synchronous serial, and 1 parallel port

Used Z89 and Z100 Computers, various configurations available Z89 from just \$195.  
ZW-120-82 Computer \$500, Z19 terminal just \$95.

**\*\* YOU MUST MENTION THIS AD TO GET THESE SPECIAL PRICES \*\***

ORDER NOW, many are "one-of-a-kind"! All items are tested functional and have a  
30-day warranty, unless otherwise noted. MasterCard and VISA accepted. Telephone or  
mail your order to:

Seattle, WA 98199  
(206) 285-7266

## EIGHT BIT SURVIVAL IN A peesee WORLD Part One

"Eight Bit Survival in a peesee World" was  
Copyrighted in 1988 by R. Kenneth Strum

The H-89 series of computers are not for "mainstream computing" as Joe Katz describes peesees. I think that in a few years, the more numerous peesee users will start similar series when the PS/2 and Mac-II machine types achieve domination. Peesee users take note: Learn from the H8 and H89/90 pioneers!

The H-89 can, using the right software tools and hardware support, perform well as a personal computer for a great number of tasks. MYCALC for H-DOS or Multiplan for CP/M will not stand head to head against Lotus 1-2-3. But both MYCALC and Multiplan will crunch numbers. Rembrandt, a CP/M program, will take numbers from a spreadsheet and make a graph. Perhaps not as pretty as Lotus 1-2-3, but very nice anyway. Also, a four Mc/S 280-equipped H-89, with 19.2KB terminal setting is a fast machine compared to a 4.77 MHz 8088 peesee. The '89 is extremely fast if it has a RAM disc (such as the Super Ram 89) installed. The AT class of peesee will overwhelm the '89 at almost any level of performance (except if you have to buy one, but don't have the money).

The key to getting best performance out of your '89 is application programs (tools), vendor support, and utility (support hardware, operating system, and utilities). There is a very good selection of all these items for '89 users. We'll explore some of these tools in the months to come. First, let's look at two vital support programs that help us survive in a peesee world.

### CPC FILE TRANSFER PROGRAM

CPC, from ANAPRO, is a set of two programs. One formats DSDD PC-DOS discs on an H-89 with Z-37 disc controller. The other program is a sweep type program that copies files to and from both Heath/Zenith soft-sector CP/M and PC/MS-DOS discs. Powerful stuff. Allows free movement of all types of files between the two operating systems. Note that you can't run a MS-DOS program on a H-89. For example, if you have Wordstar or New Word on your H-89 at home and use them on a peesee at the office, then you can bring home your work on a MS-DOS data disc. Use CPC to copy the files to your CP/M data disc and work away. When finished, use CPC to copy the updated CP/M file to the MS-DOS disc, then take it back to work. I've used CPC since it was first announced. It's one of my most valuable support utilities.

CPC's format program, PCForm, is simple to use. Execute as: "PCFORM". The program comes up, announces its' version, (mine is 1.10) and which of the one format(s) available do you want to use. The currently available format is PC-DOS 2.0 DSDD 48 TPI, with a storage capacity of 360 K. CPC has the capacity to read many other PC formats. The program shows side and track being formatted, similarly to PC-DOS FORMAT. That's it. My PCForm runs under 64 K CP/M-80 (Heath/Zenith 2.2.04) and a 63K Z-system on the Super Ram 89.

It doesn't seem to run with less memory. But it also runs on a plain-vanilla 63K Z-system.

The file transfer program is named "CPC". It's patterned after the sweep and Disk77 programs. Movement of files across the CP/M and MS-DOS disc formats is very easy. In moving files you have the capability to:

- Group move (copy) files by tagging them first (what a blessing!)

- From MS-DOS to CP/M

- or

- From CP/M to MS-DOS

- Access MS-DOS subdirectories as source (not destination)
- Move individual files
- Erase CP/M and MS-DOS files and subdirectories
- View and print text files
- Rename files
- Debug and adjust disc parameters

CPC will read the following PC disc formats:

- PC-DOS 1.0 SSDD 48 TPI (160 K 8 sector)
- PC-DOS 1.0 DSDD 48 TPI (320 K 8 sector)
- PC-DOS 1.0 DSDD 96 TPI (640 K 8 sector)
- PC-DOS 2.0 SSDD 48 TPI (180 K 9 sector)
- PC-DOS 2 & 3 DSDD 48 TPI (360 K 9 sector) "the standard"
- PC-DOS 2.0 DSDD 96 TPI (720 K 9 sector)
- Eagle 1600 800K 5 sector 96 TPI

Requirements for CPC are: H-89 or H-8 with soft sector controller. H-37, CDR, and magnolia controllers are supported. CP/M versions for Heath/Zenith 2.2.03 & 2.2.04, CDR 2.91, Magnolia 2.24, and Z-system are supported. Both 48 and 96 TPI double sided drives are supported.

CPC is simple to use--just follow the menus. A hint for its' use: ANAPRO uses the term "move" to denote copying between CP/M and MS-DOS. Invoke CPC with "CPC". Then, select the disc type of MS-DOS disc to read from the menu. Then, when prompted, select which drive will be used for the MS-DOS disc. You are now at the CPC main menu. It assumes a MS-DOS to CP/M transfer. If desired select "C" from the menu and get ready to copy from CP/M to MS-DOS.

CPC has the capability to recover deleted MS-DOS files. I haven't used that feature so I can't detail its' operation. According to the CPC manual, it requires some paging through the MS-DOS disc to find the end of the file you want to recover. CPC includes tools to locate and isolate the possible sectors.

Here is a list of CPC main menu commands:

### MS-DOS ==> CP/M FILE TRANSFER

- B - Back up by one file (also BS & DEL)
- N - Next file (also SPACE & RET)
- T - [Tag] transfer with same name

## EIGHT BIT SURVIVAL - Continued

R - [Tag] rename before transfer  
 U - [Tag] untag  
 M - Move tagged files to CP/M  
 C - Copy CP/M files to MS-DOS  
 V - View the file  
 X - Exit (also Q)  
 ? - More help (also H & ctrl-C)  
 F - File recovery  
 S - Sort the Directory  
 D - Directory display  
 L - Log a new MS-DOS disc  
 G - Group map  
 I - Info on free groups  
 J - Set the date and time  
 P - Printer toggle  
 K - Erase (kill) MS-DOS file  
 A - Adjust disc parameters  
 % - Toggle deleted files

### CP/M ==> MS-DOS FILE TRANSFER

B - Back up by one file (also BS & DEL)  
 N - Next file (also SPACE & RET)  
 S - Sort the CP/M Directory  
 T - [Tag] transfer with same name  
 R - [Tag] rename before transfer  
 U - [Tag] untag  
 M - Move tagged files to CP/M  
 V - View the file  
 C - Copy MS-DOS files to CP/M  
 X - Exit (also Q)  
 P - Printer toggle  
 K - Erase (kill) MS-DOS file  
 J - Set the date and time  
 L - Login new CP/M disc  
 % - Toggle deleted files  
 ? - More help (also H & ctrl-C)

CPC has worked flawlessly for me for nearly a year. it's not complicated. It does just what it's supposed to do. It is an essential package for any H-89 user who must interface with the peesee world. I rate CPC "FOUR STARS".

### CP/EMULATOR

CP/Emulator is a set of HUG programs that do two things:

- (1) set up a Z-100 terminal emulator on a PC (ZEmulator)
- (2) allow CP/M programs to execute under PC-DOS (CPM)

CP/Emulator's virtues include price (\$20), 63 K TPA (the memory area where programs execute), partial H-19 graphics support, and for many programs, execution.

ZEmulator alters memory, so be careful. Best to use this in stand-alone mode with CPM, (that is, don't try to run this package under Windows).

Using CP/Emulator is simple. Set up ZEmulator once in accord with the clear instructions. There's a version for Zenith peesees and one for all others. ZEmulator defines the peesee terminal as a Z-100. This includes the H-19 graphics set. After executing ZEMULATOR, you can run CP/M programs with the command "CPM PROGRAM ARGUMENTS".

"PROGRAM" is the name of the CP/M program you want to run.

"ARGUMENTS" are any command line terms such as switches or file names. The CP/M program will then run.

There are two types of programs that simply won't run under CP/Emulator:

- (1) Programs that perform a directory on startup
- (2) Programs that modify or alter (even in memory only) the operating system

For example, you must patch Wordstar or New Word to disable the "Directory on Execution" feature for them to work. Pat Swayne (the author) includes the patch for Wordstar 3.3. New Word users can select "No Directory" with the install program.

Emulation programs usually run slower than the non-emulated versions. CP/Emulator is no exception. On a AT or Z-248 machine, the lag isn't bad.

Sweep programs such as Hug File Manager (HFM), Disk77, and Datsweep won't run, period. Ditto for other programs that automatically make a directory call on startup.

What works best with CP/Emulator? Programs that don't address the directory, don't use overlays (overlays require disc access which slows the program down), and where execution speed isn't important.

The program has paid for itself for me by allowing me to use LONG and LOUD (printing utilities) on a peesee. These very useful programs print banners in large print (using dot matrix printers) and "sideways" (again, using dot matrix printers). I don't use these programs every day, but I've saved money by being able to legally use them on my Z-90 at home and when needed, on my peesee at work. Another program I use, Milestone Project Manager runs fine under CP/Emulator. So, I can use it to help manage my personal and business projects. Rembrandt programs work well under CP/Emulator. I haven't been able to get Thoughtline (an outline processor) to run under CP/Emulator. (Note: I use the programs on one computer at a time, in accordance with the license agreements and copyright laws. If a software company doesn't allow this, I don't use their products.) CP/Emulator has many competitors. This is the only one I've used. The inability to use programs that make directory calls limits CP/Emulator

# SEBHC JOURNAL

Volume II, Number 8, Page 12

## EIGHT BIT SURVIVAL - Continued

usefulness. If I could only get Thoughtline and HFM to work...

I rate CP/Emulator "TWO STARS".

### EMULATE

Emulate is a program that allows H-8 and H-89 computers using Heath/Zenith CP/M 2.2.03 or 2.2.04 (CP/M-80), Z-System, or CDR CP/M BIOS 2.91 to read other CP/M disc formats. The Heath/Zenith version for H/Z-37 controller also has a format capability for those same disc formats!

Unlike CPC, Emulate requires patching or replacement of the standard BIOS. ANAPRO includes several common disc driver combinations ready to replace the standard BIOS. ANAPRO includes support for their four and six MC/S speedup modifications. Patching is needed only if you have customized your BIOS. This is relatively painless since there is a "SUBMIT" type of utility included that will make the patches automatically to your BIOS.ASM file.

The procedure for installing Emulate includes these steps:

FORMAT & SYSGEN a new disc. It becomes your Emulate master disc.

Put the following CP/M utilities on the new disc:

STAT.COM  
CONFIGUR.COM  
MOVCPM37.COM  
SYSGEN.COM

Copy the Emulate BIOS module from the backup copy you made of the Emulate distribution disc. (You did make a backup, didn't you?)

Reset the computer and re-boot.

Make the BIOS read/write-able with the command:

STAT BIOS.SYS \$R/W <RETURN>

Erase BIOS.SYS.

Rename the Emulate BIOS module to "BIOS.SYS".

Issue the following command:

MOVCPM37 \* BIOS.SYS <RETURN>

Note: The above command will generate a 64K BIOS if you have 64K RAM installed. If you need a small BIOS because you use "overhead memory", then replace the asterisk with the number of K you want the BIOS to be. For example, if I need

a 1K overhead for KEYMAP, then I would use the command "MOVCPM37 63 BIOS.SYS".

SYSGEN from the memory image by issuing the following commands and responses:

SYSGEN <RETURN>  
<RETURN>  
A <RETURN>

Reset and reboot the computer.  
CONFIGUR to your system parameters.

Your Emulate system disc is now ready to work. And work well, it does. Support includes 48 TPI and 96 TPI drives. There are over forty formats in all. Some of the formats supported are:

Kaypro II SSDD  
AMPRO SSDD, DSDD, 80TK DSDD  
CDR SSXD, DSXD, 80TK DSXD  
Magnolia SSDD, DSDD, 80TK DSDD  
Osborne I SSDD, SSDD  
TRS80/3 Montezuma SSDD  
TRS80/4 CP/M+ SSDD  
TRS80/4 Montezuma SSDD, V1.30 DSDD, V1.32 DSDD,  
V1.42 DSDD, 80TK DSDD

Emulate works only when you specifically call it up. Otherwise, your system works as normal. When you need emulation, execute with "EMULATE". A menu appears. Choose which drive you want to be which format. Then, exit. If you chose "B" as a Kaypro II drive, then you can put a Kaypro II disc in "B" and read and write to it. You can execute "non-terminal specific" programs from the "B" drive. Whenever you want "B" to be a Heath drive again, run Emulate and chose the "Unpatch" option.

Right now the only limitation with Emulate is its' inability to read/write to Kaypro II DSDD format. ANAPRO tells me this is a limitation of the method in which Kaypro used the "side select" feature. They expect a solution in the future. I rate Emulate "THREE STARS".

### VENDOR SUPPORT

Vendor support is critical. I rely heavily on ANAPRO and QUIKDATA for the vast majority of my software and hardware upgrades. HUG is an essential support organization, with Pat Swayne as a "Numero Uno" for HUGgies. As we progress through the items I'll discuss vendor support for those items.

### APPLICATION TOOLS ARE THE KEY

Despite this month's emphasis on utilities, the real key to survival is using good tools that do what you need doing.

## EIGHT BIT SURVIVAL Part 1 End

Those tools might be word processors, spread sheets, financial analysis packages, banner print programs, etc. Program developers might use MBasic, C, Fortran, or Lisp. The support tools have to provide a platform for the application tools. We'll take a look over the next few months at some outstanding tools that will run on the '89.

Some of the application programs (tools) we'll explore:

o "Thoughtline" is an outlining program, designed to be used with a word processor. It uses the Wordstar/NewWord control key sequences. Produces files easily used by those programs. The outlining programs can help a writer home in on a paper's basic points. Thoughtline does its' job very well. I rate it "THREE STARS".

o "Newword" and "The Word Plus" as distributed by ANAPRO was, in my opinion, the best word processing package available. I think it had the right mix of features, performance, and price. The inclusion of "The Word Plus" as a spelling checker weighed heavily in its' favor. I rate it "FOUR STARS".

o "Rembrandt". This is a series of programs that produces business graph charts. It has a driver that allows graphics to be incorporated with wordstar or Newword documents. Particularly impressive. Also, has utility to read in Ed-A-Sketch files. I rate "Rembrandt" "THREE STARS".

o "Long" and "Loud". Two programs which work separately and give first-class results. Both are simple, menu-driven, and work without modification under CP/Emulator. "Long" allows dot matrix printer users to print "sideways". "Loud" is a banner producer. I rate both utilities "THREE STARS".

o "Milestone". This is a good project-management program which simplifies the Critical Path Method of project management. Generates several fixed reports. Rates "THREE STARS".

### CONCLUSION

With ANAPRO'S CPC and Emulate utilities, it's easy to move data to and from the H-89. The other computers can be 16-bit or CP/M machines. "Emulate" also allows you to aquire public domain programs from your friends CP/M machines other than yours. Some vendors sell generic CP/M programs in one format (ex: Kaypro-II). "Emulate lets you buy and use those programs. CP/Emulator allows the limited reverse of CPC: running CP/M programs (including those with H-19 characteristics) on 16-bit systems. Use the right application tools, and the H/289 holds its own against many personal computing jobs run on overpriced 16-bit machines.

### \*\*\*\*\* STAR RATING SYSTEM \*\*\*\*\*

FIVE STARS - Fulfills promise of powerful, uncomplicated computing and works as advertised. Impossible to lose data. Documentation is superb. Training is included or--better yet --not needed. Price is fair, considering power and useful-

ness. It's the ultimate Dream Program. I have yet to meet a FIVE STAR program in either MS-DOS or CP/M...

FOUR STARS - Powerful software which lives up to its' advertising. Not as slick as five star program, but stands nose-to-nose with anything similar. Data autosave may or may not be included in the exit routine. Documentation is good, organized for quick access. Little training required and price is fair. Few programs rate FOUR STARS...

THREE STARS - Powerful program which performs pretty much as advertised without undue complication. You may have to make more decisions such as which drive to save on, etc. Useful, though perhaps a bit tougher than four-star version to use. Losing data takes effort, although carelessness may allow you to exit without first saving. Documentation has all the information you need. Little training is required. Price is reasonable for the power and usefulness provided. Really, this is a four star program which is not as highly polished as we'd like. Most successful commercial programs generally fall into this category...

TWO STARS - Here, we really move down a notch. The program is useful, does what it says, although it may not meet expectations. Can, but may not be complicated. Losing data is not easy. Documentation may not be complete, but the most important elements are there. Training may or may not be needed, depending on complexity. If the program is complex, ?training is needed. Price is high, compared with usefulness and expectations. This is your average program.

ONE STAR - Again, we move down a notch. Program concept is useful, but may not perform as advertised. The program will execute and save data (if data creation is part of its' function). Command structure is awkward, illogical. Documentation may not contain vital information. Price isn't a determinate factor since I won't buy or recommend a ONE STAR program.

NULL DEVICE - Absolute zero. High price, lousy or no documentation, high data loss, etc. NULL DEVICE software is cheap, won't work, or is ridiculously high priced.

### product data

CPC Version 1.3 (includes PCForm 1.1) \$35 plus \$4 shipping--  
EMULATE Version 2.3 \$59 (\$49 for CDR 2.91) plus \$4 shipping--  
Vendor:

ANAPRO CORPORATION  
205 Lake Nacimiento Drive  
Paso Robles CA 93446

## HEATH USER'S VERY SPECIAL OFFER

The CompuMagic Utility Package

AND SEARCH

FOR THE INCREDIBLE NEW PRICE OF

ONLY **\$35**

(That's \$40 less than the old prices)

Your CP/M computer works and you have no intention of abandoning it. We know. There are three working CP/M machines here at CompuMagic, and we use them regularly. They work - they produce letters and advertising materials and invoices; they keep sales records and customer lists; they're used by younger family members to do schoolwork and occasionally even play games. We have one advantage, though. We have the CompuMagic Utility Package programs and SEARCH on our machines.

The CompuMagic Utility Package will make your life easier, too, regardless of what you use your computer for. These programs simply do more and work better than the programs you're currently using. They copy, rename, erase, take directory listings, capture screens, tell you what files are on one disk and not another, and so much more. They don't take a long time to learn and they're not expensive.

The SEARCH program allows you to find any string in any ASCII or word-processor text file without complicated pre-processing or setting up of key-words.

The remarkable \$35 package includes the CompuMagic Utility Package - all 20 programs (plus installation programs) - PLUS the SEARCH programs on your choice of disk formats - soft-sector 5 1/4", 8" CP/M or HEATH Hard Sector - PLUS complete printed documentation.

**30 DAY MONEY-BACK GUARANTEE:** If these programs don't make your computer easier to use, return the package to us with your comments for a full refund.

**Never Copy-Protected:** CompuMagic products are never copy-protected.

**TO ORDER:** Send your Check or MD (Personal checks accepted) or call with your Visa, MC or COD order. Specify disk format from the list. Never a charge for UPS ground shipping. Add \$2 for UPS COD and \$5 for overseas. (MD Res. Add 5% tax.)

Disk Format List: Heath 10 Hard Sector CP/M, 8" SSDD CP/M, SSDD:48tpi Heath w/Magnolia CP/M, DSDD:48tpi Heath w/Magnolia CP/M, DSDD:48tpi Zenith I-89, DSDD:96tpi Zenith I-89, SSDD:48tpi Zenith I-90, DSDD:48tpi Zenith I-90, SSDD:48tpi Zenith I-100 (CP/M-85), DSDD:48tpi Zenith I-100 (CP/M-85)  
SSDD=single-sided double density, DSDD=double-sided double density, 48 and 96 are tracks/inch

CompuMagic, Inc.

## LETTERS POLICY

The READER'S LETTERS feature is provided as an open forum for the free exchange of H/Z 8-bit computer information between all subscribers and readers of the SEBHC JOURNAL. We ask all correspondants to keep their letters reasonably concise and preferably around 250 words maximum length (about six screens, 24 lines/screen of ASCII text). The JOURNAL shall exercise its' right to condense letters exceeding this recommended maximum unless that might destroy their intent or meaning. In such cases we shall contact the writer.

The SEBHC JOURNAL RESERVES THE RIGHT TO REFUSE TO PRINT any letter containing profanity, derogatory racist, or sexist remarks, specific political or libelous statements of any nature directed toward any individual or organisation. The JOURNAL will not knowingly publish malicious fabrications, lies, or distortions of fact, but will take appropriate legal action against any individual(s) uttering them.

## DISCLAIMER

Reviews, editorial references, and advertisements in the SEBHC JOURNAL should not be taken as authoritative endorsements of any products or services. Opinions expressed in the JOURNAL are based on the individual's experiences and shall not in any way be considered as official endorsement or certification, nor do they reflect intensive technical analysis as might be provided by a professional testing firm. Although we do not knowingly publish fraudulent materials, we shall not be held liable for any damages arising from purchase or use of any product. People having complaints about goods or services purchased from our advertisers are urged to send us written notification of their specific complaints so that we may take any action which we deem appropriate. Caveat emptor!

## The SEBHC JOURNAL's Back Page

### Society and Journal Policies

- \* The SEBHC JOURNAL is published twelve times a year and strains to get mailed the 22nd of the month. Editorial deadline: 10th of each month.
- \* All advertising is printed free of charge. Vendors will please submit B&W "camera-ready" ad copy, 7" wide by 9" high (one page/issue) no later than the 15th of month in which it's scheduled to appear. All Society members can run one free--new--250-word Want Ad a month.
- \* Subscriptions are \$15/year in Canada, Mexico, the U.S.A. and its possessions (all others \$25/yr) and start in month following receipt of application. Please make cheques or money orders payable to L.E. Geisler. Single back-issue copies by special order--allow 6 weeks for processing.
- \* Subscribers are automatically Society of Eight-Bit Heath Computerists members. Members' ID# and expiration follows the name on mailing label. The three member classes are: REGULAR (H/Z 8-bit user), ADVERTISING (one vote/vendor), ASSOCIATE (non-8-bit computerist, library, etc.). REGULAR members can vote and hold any Society office. ASSOCIATE members cannot hold office or vote in Society elections. The Society's official meeting coincides with HUG's annual conference; place and time announced in each July JOURNAL issue.
- \* The SEBHC JOURNAL is composed, edited and published by L.E. Geisler at 895 Starwick Drive, Ann Arbor, MI 48105. Phone 313-662-0750, 9am - 6pm Eastern Time, Monday thru Friday. Off hours, try 313-769-6052 (home).
