October, 1991

Subscription Information & Order Blank on Page 11.

Reader's MAILBAG

Dear Len,

Noted your interest in finding some of your ancestors you mentioned in VI:1 and thought I might be able to give you a few hints. Paid a visit to our local genealogy library yesterday and looked in their computer files for the family names you had listed.

I found numerous HUMESTONS, HUMSTONS, etc., also plenty of CROWSHAWs, CROSHAWs, and other variant spellings, plus DOOLITTLE. But without a first name or a guess at the probable time period, it's quite hard to tie them down.

Have you checked to see if there is a large LDS (Mormon) church in Ann Arbor or the vicinity? These people [Mormons] are the original genealogists, believe me!

I belong to the local genealogy society, and we have lots of books and so on that we keep in the same room as the church material. Each LDS church [of "Stake"] or at least one in any large town or city has a Family History Library. The one here is very nice and they recently installed six computers, complete with what they call the International Genealogy Index, plus another database simply called Ancestry. Also, most of this stuff is on microfiche cards or films, so you may not have to call Salt Lake to find what you want. None of the material I have here has any Salt Lake phone numbers on it, so I can't give that [information] to you right now. I do suggest that you check the phone book under churches for 'LDS' or 'Church of Jesus Christ of Latter Day Saints'. If you find that, there'll be a list of their facilities, and probably a listing for 'Family History Center', or 'Family History Library'. They're usually open six days a week, and sometimes evenings to nine. Visit one of them--or the only one--and ask some questions. They'll be very helpful. They don't care what religion you are (if any), and there's no charge for use of their facilities. You might try also to locate a local Genealogy Society or club, one of which I'm sure will be in your city. Go to one of their meetings; they're usually quite friendly and will answer your questions as to how to go about finding your people. HEY!! I just thought of something and looked it up in one of my magazines; here it is: Genealogical Society of Washtenaw County, Inc., P O Box 7155, Ann Arbor, MI 48107, no phone number given. From the looks of this listing there must be one of these groups in every Michigan town! So maybe you're in business. If you want to trace back a few generations, you don't need an expensive computer program--do it

on paper. Genealogical forms are available from many sources. Have fun....

BOB EVANS, Hemet, CA

[Hey, Bob! Thanks for your informative letter which arrived the day after I posted the September JOURNAL! My brother in Florida called the same day and I mentioned your letter to him. He said that the name probably comes from a river in Scotland called Home, or something like Homesdown, and that there are a great number of variations on that spelling kicking around. He's here for a couple days or so, and we'll check out as many sources you suggested as we have time for. More about this later--thanks for writing. -- ed]

Dear Len,

I found your coverage of D-G Electronics' Super-89 CPU board and LLL's BIOS-80 in your September '91 edition (VI:2) of more than passing interest. Imparting knowledge of the older systems is a necessary part of the support [which] you and I provide to our subscribers.

Of course, one of the problems is that of determining exactly what a customer has without actually seeing the hardware. [For example] after a couple turns on the merry-go-round I recently assisted a new subscriber bring up HDOS 2.0 on a used soft-sector machine. Now there's a rare breed for the second-hand market!

But there is one thing I should add to your discussion of BIOS-80. Mainly, the reason is because I recently helped another subscriber to the "Staunch 8/89er" set up an exclusively soft-sector system after [he had been] running some years with hard-sector and BIOS-80 only. He had gotten Lee Hart's soft-sector controller and a pair of 96tpi drives, but wanted to eliminate hard-sector code from his BIOS-80 system to get more memory. [Note: A BIOS-80 BIOS can be between nine and 16k in size, compared with standard CP/M's 6k BIOS! -- ed]

Regrettably, [removing H17 code] can't be done with the materials on BIOS-80 distribution disc(s), nor can it be done if you originally brought up your vers 2.2.04 from the hard-sector "setup" disc. Both presume existence of (at minimum) the hardsector system. The only way (for both versions) is to go back to good old MAKEBIOS & select the menu's H37-only option. On softsector it's not actually too bad and takes only about five minutes to execute if you have [at minimum] a pair of drives to do it on. In this process you can add about 1k RAM to the TPA. Doesn't sound like much, but there are times when every byte helps! [cont'd]

More Reader's MAILBOX

That's all for now--and I wish you and the SEBHC JOURNAL a belated happy birthday!

KIRK L THOMPSON, Editor The Staunch 8/89er, P O Box 548, West Branch, IA 52358

[Yay, Kirk! Nice to know that at least ONE reader saw those articles. Now I wonder if anyone has actually tried to make up either system using my directions? The original documents which came with LLL's stuff were quite fractionated and covered everything in a most non-linear order and had narrative descriptions jumbled into the actual procedures--which jumped everywhere between front and back pages! From sheer desperation I re-wrote those instructions--after slogging through the verbirosities--into the two reasonably-linear step-by-step sets of directions we printed in our last edition. And I do plan to continue doing such re-write jobs on all of the software documents I have until they all have a BEGINNING, a MIDDLE, and an END! Lee Hart and others may raise all kinds of hell about copyrights and other legal flummery, but if what's supposed to be an INSTRUCTION set reads more like an Agatha Christie who-dun-it, then it ain't a set of instructions, it's a Stinking, Wrongly-Named, Poorly-Written, Would-be Mystery novel, and don't belong in MY computer shack! RRRR-r-r-r-ROAR! -- ed]

[LLL BIOS-80 & S89 BIOS afterthoughts: 1 - The Super89 BIOS files come set up for both hard and soft sector operation on the hard sector distribution disc. It isn't always necessary to struggle with MAKEBIOS for that version. If you can read the hard-sector distribution disc, just replace the H37 BIOS on a soft sector boot disc with the Super89 BIOS. The rest of the operation is quite straightforward and follows the S89 distribution manual installation directions. Note: Either hard or soft sector S89 BIOS takes up from nine to 15k disc space. (I'm not sure how much memory it takes!) 2 - Henry Fale says it isn't too hard to make up an H37 BIOS-80 boot disc from the many BIOS-80 files on the distribution discs (there are two, one with all six BIOS versions, the other with the BIOS80 '.ASM code listing. Even with ZCPR installed, this BIOS takes up less disc geography than the S89 code does--about eight to 9k. In either case, the lost space isn't that big a deal as you get lots of additional flexibility. -- ed]

Dear Mr L E Geisler:

I've gone over the latest SEBHC JOURNAL lead article--VI:2 pp 3-8 et al, and it sounds as if this [information] might be an answer to my prayers and [perhaps] get me back into the 8-bit family. Thanks A Heap!

[Note: I've] written [this] on a peesee, which may be more powerful [than an '89] but I don't think it's nearly as user friendly. My wife won't use it at all. That may not be all bad!

LOWELL F BALTZELL, 752 Fairfield Drive, Augusta, GA 30909

[Well, Lowell, I've had several family members try both our H19-type keyboards in comparison with the H120 keyboards. Their unsolicited judgement was that they like the H19/89 much better than the '100-family keyboard! And they appreciate the lack of the '100's "electronically enhanced" key-click and auto-repeat "feature". Glad you found our articles of some value, but you forgot to tell us if we should keep on printing "8-bit hardware sketches".... -- ed]

Dear Lenny,

In going through my collection of SEBHC JOURNALS, I was horrified to discover that I'm missing the April and May 1991 issues! I've enclosed a \$5 cheque for those, and hope you can still send them to me.

The info served up by the JOURNAL along with The Staunch 8/89er is invaluable in the care and feeding of my H90. I don't want to miss anything that will keep my machine purring along!

HAROLD SEGAL, 3563 Aurora Circle, Memphis, TN 38111

[Harold, your back issues went out this week and should be in your hands before you read this. Please tell your H90 not to worry! -- ed]

Dear Lenny,

Yeah, yeah, I'd be writing this in WordStar on the Z90 if it were working, but have a little work to do on the monster!

I let it sit for three or 4 weeks while touring "down under". On coming home, I switched it ON, get the regular "H:" prompt, but directly below it eleven and a half lines of the screen filled with !!!!! points! Called the local H/Z expert and confirmed that there's a memory chip (2114?!) on the CPU board that's bad. Haven't torn into the guts yet, but it's on the list of "things to do"! Oh, me....

If this current problem turns out to be anything more than [simple] chip replacement, I'll write you something about it.

CORKY KIRK, W6ORS/NNNOORS, 270 Kapualani Street, Hilo, HI 96720

[Roger, Corky! Seems I had a problem similar to yours on an old H19A I bought from the University Property Disposition office a few years back. This one was fixated in the keyboard decoder, and I eliminated it by replacing that (very expensive) IC. The bad decoder would print out different and weird non-H19 screen graphic symbol for every key struck, no matter how you tried to correct the problem! The 8-bit experience: "Never A Dull Moment". But that is exactly what keeps us enamoured of these dear "old grey boxes", is it not? (Peesee cultivators can't say that.) Corky, please do remember: We Are Anxiously Awaiting That Article.... -- ed]

A NICE PASCAL UTILITY...

A PRINTER CONFIGURING UTILITY IN PASCAL

By Kirk L Thompson

Editor, The STAUNCH 8/89er

P.O. Box 548, West Branch, IA 52358

Copyright 1991 by Kirk L Thompson

On page 9 of your August-90 issue (V:1) you discussed printer configuring utilities in interpreted BASIC. Roughly a month before reading that I had spent two afternoons writing just such a beast for my old 9-pin C-Itoh Prowriter 8510, but I did it initially under the HDOS 2.0 version of Lucidata Pascal. The listing for my latest CP/M version is given below; the differences between HDOS and CP/M versions are extremely minor. Converting it to Borland's Turbo Pascal may also be easy (for anyone running that version). My original reason for writing it was because printer output for Bauman's COBOL tutorial in REMARK--discussed by me in several letters last year--should be set to seventeen characters/inch.

Although written specifically for my C-Itoh, modifying it for other printer makes should be fairly simple. All that's needed is to change the codes sent to the printer. In the program, these come near the RESET procedure (end SET_MARGIN procedure), and inside the main section's CASE structure. The program sends printer control codes which set characters per inch, lines per inch, the left margin, and "reset" to the power-up configuration. For the C-Itoh Prowriter, these are:

Function	Codes
Pica (10 cpi)	ESC N
Elite (12 cpi)	ESC E
Condensed (17 cpi)	ESC Q
Six lines/inch	ESC A
Eight lines/inch	ESC B
Left margin	ESC Lnnn
"Reset"	ESC N ESC A ESC L000

Two of these need further explanation. "Left margin" is the ESCape character, followed by an "L" and THREE digits. The digits define where the margin is set. For example, "000" is left flush, "010" is 10 characters to the right of flush, and so on. As for the reset function, the C-Itoh (unlike some other makes) has no separate code that performs this. So I've merely strung together in the RESET procedure those simulating printer turnon cpi, lpi and margin settings.

One advantage of writing such a utility in Pascal (or indeed any other compiled language) is that neither interpreter or runtime system is required once the program is compiled. Of course, Turbo Pascal will directly create a stand-alone .COM file. Lucidata requires only one more step, using the "\$G" pragmat, as in:

```
PRUN $G:SETLST SETLST
```

to create a .COM (or .ABS) file from the .BIN p-code file.

Once done, the program can be moved elsewhere for stand-alone use and doesn't require the runtime system to execute.

I must emphasise how Lucidata handles HDOS device drivers. There are actually two ways you can call this stand-alone program under HDOS. One is WITHOUT a command-line parameter, that is, you just give the command "SETLST<return>". If you do this and DO NOT have the printer driver LOADED, the program will abort with the somewhat irrelevant error message that there isn't enough memory to load the driver! You MUST have the driver LOADED if you call the program without a parameter.

Your other option is to INCLUDE the name of your printer driver on the command-line as a parameter. In other words, and using the standard HDOS convention of LP: for your printer, you can call the program with "SETLST LP:<return>". In this case, the Lucidata runtime system will AUTOMATICALLY load the driver you specify BEFORE it runs the program. This has distinct advantages over the previously-mentioned method. But please note that the code I've supplied DOESN'T check the command-line for this parameter.

Command-line parameter checking is, in fact, the next improvement I have in mind for the HDOS version. That would provide two things not presently existing in the program: a check for typographical errors in the parameter and, more importantly, the DIRECT use of that parameter as the actual printer device in the program. Doing that wouldn't limit the program to just use with LP: if your system setup requires (as mine does in a couple of instances) different driver names for the same printer on different bootable disks. Fortunately, because the printer driver is built into CP/M's BIOS, this kind of thing isn't required there.

SOURCES FOR PASCAL COMPILERS:

LUCIDATA PASCAL for CP/M and HDOS (by Larry Reeve and David Gibby): Kirk L Thompson, P.O. Box 548, West Branch, IA 52358; \$25 postpaid, includes 100-page hardcopy manual. Not as fast nor as "extended" as Borland's Turbo, hence closer to Niklaus Wirth's original on the latter score. If you run both systems, having BOTH versions available is convenient because you can "share" programs and utilities between the two at the source-code level as I've suggested above.

TURBO PASCAL for CP/M (by Borland International): Sage Microsystems, 1435 Centre St, Newton Centre, MA 02159-2469, 617/965-3552; \$60 plus shipping. Lightning compile and execution and a large number of nice extensions. Regrettably, Sage doesn't support hard-sector (H-17) format.

TINY PASCAL for HDOS (by Mark Kroska, based on an earlier version by Jim Teixeira--which, in its turn was based on a series of articles in BYTE in 1978). This is public domain and may be available from those local HUGs which still support the '89. Zenith Users Group (ZUG) stocks it as simulated with integers).

PASCAL UTILITY, continued

p/n885-1086[-37] for \$20, plus \$2 shipping. If interested, I sell it, with supplementary material not available elsewhere. A subset of standard Pascal, it uses integers only (CHAR and REAL aren't supported), but it's suitable for utilities/games not requiring REAL numbers (handling of CHAR type may be simulated with integers).

Listing 1 - Kirk Thompson's SETLST Utility Programme

```

program setlst (printer);
{
  Sends ESCape codes to the C-Itoh 8510B Prowriter printer to
  set elite, condensed, proportional, & pica (normal) cpi; 6
  or 8 lpi; left margin, and printer reset. REQUIRES H/Z-19

RATHER RANDOM INPUT

by

Your Editor

[Another Editor's Note: We think this series was sent to us by our JOURNAL author friend, Laszlo Veisi of Niles, MI. We apologise--for having edited the images slightly so they'd fit our column layout--to whomever it was who COWardly submitted these unsigned bovine images to us. We hope our readers have enjoyed this non-computing diversion--but we DID say

This general portion of Michigan was severely plagued by numerous electrical storms during June and July. Early in June we were completely without power for forty-three contiguous hours. Three weeks later, we again lost power, this time for 44 hours. During both incidents, Our Beloved Power Supplier, Detroit Edison, had crews working non-stop around the clock to restore power to every one OUTSIDE a quarter-mile radius centered on our QTH/1020/location! Also during the same period, their "24-hour trouble phone lines" were either busy (understandable), answered by a "nobody's home" recorder, or (not understandable or comforting to experience) a number of non compos mentis (we assume) human operators who'd promised: "Faithfully, power will be restored Quite Soon Now--In Fact, Crews Are Probably Working on Your Lines As We Speak"! Yeah, sure.

Since we had lost about half the text of the July JOURNAL during that June outage, we decided to check out battery-powered backup supplies (for Heather) at the local CompuAdd store. The 450VA unit which we finally bought is quite adequate for Heather and the LQ-800 printer (it also can run the '89 AND our H120 simultaneously). We thought it was a Real Bargain at \$339 + 4% tax, and thus far it has more than paid for itself by performing flawlessly thru numerous power line blinks and burps.

We recommend that everyone who has suffered the indignity and inconvenience of power-company outragery get a similar device and install it just as soon as you can. But don't get it from CompuAdd, especially if you're short of "green stamps"! Instead, order American Power Conversion's Back-UPS 450 from P-C Connection, 6 Mill Street, Marlow, NH 03456, phone 800/800-5555. Their catalogue number for this model is 7107, price is just \$235, AND NO HIDDEN CHARGES. Please note that this is over \$100 below CompuAdd's price.

Although PC Connection is primarily peesee-oriented, ask them for a copy of their latest catalogue. They carry a good line of printers, and have a Service Center "ready, willing, and authorised to service your Epson and Canon BubbleJet printer". They offer same-day turnaround on most repairs at the low rate of \$25/hour, also handle warranty repairs on equipment whether or not it was purchased from them. They'll even send you packaging for safe transit of your equipment! For more information, call them at 1-800/800-0015...and do say that you read about them in the SEBHC JOURNAL!

I wonder: Will PC Connection rent their packaging to our Cape Cod friend, Oscar? Seems as if he needs to ship one or the other of his two '89 computers to us every other month...

PLEASE NOTE: LINDLEY SYSTEMS has moved from their East Coast location to: 8139 E Mawson, Mesa, AZ 85207; ph 602-380-9175. Our thanks to Paul Herman & his 2100 LIFELINE for this info!

H/Z HARDWARE SKETCHES For the Dedicated Only!

H/Z89 and Z90 VIDEO DEFLECTION CIRCUIT BOARD

Part number HE181-3400. Shown from component side.

SERVICE NOTE

This board was Heath's last version. It has an outboard CRT interface card mounted on the heat-sink/radiator behind Regulator Q204 and Horizontal Driver Q214. Electrical operation is nearly identical with earlier boards except there is an external brightness control on the computer's rear panel. Usually the most serious failure is heat-related and is caused by poor mechanical and electrical contact between C201 and P201--pins 1 and 2--which destroys the circuit board's solder-to-foil bonds. Carefully remove card and examine, clean and GENTLY re-solder loose connector pins to

circuit-board foils. With card component-side up, use a good heavy pair of pliers and moderately flatten all P201's pins. Clean flattened pins and apply a thin coating of solder to all of them to ensure better contact. Use low heat to avoid re-opening pin-to-foil bonds when re-soldering them. If circuit foil lifts from the card during these steps without breaking electrical contact, a drop of "crazy glue" or equal usually restores the foil's mechanical bond to the card. DO NOT RE-SOLDER GLUED FOILS UNTIL GLUE IS THOROUGHLY HARDENED--usually overnight. The glue is quite flammable and will emit hazardous, noxious fumes which will make you deathly ill. Be sure to use lots of fresh-air ventilation during this step.

OTHER VOICES, OTHER VIEWS

From the San Diego Hug's D&D LITE Sep-91 Newsletter's "W-O-M" (WOM-Write-Only-Memory--You're supposed to ignore it.) -- by Ol' WhiteBeard, Hissef

[Condensed to fit our column layout. -- ed]

"I'm paging through a copy of Portable Office--Sep-91--and my eye catches (ouch!) on an article's beginning sentence. It says: 'Marte Brengle bought a portable computer with 80.'

"[Bo knows portable computers??] Is this an article about computers or athlete/consultants, or about a heretofore uncelebrated member of my clan? Of course, I had to read the rest of it to find out.

"The article is in fact about buying used computes. It's titled 'Pre-Owned Bargains' and subtitled 'How to find a deal that doesn't stink and may save you thousands'. [Classy eh?] The article is principally a collection of anecdotes about how various folks found wonderful bargains in used computers, although sometimes lots of refurbishment was needed to bring them up to snuff. I question the author's taste in opening with a tale of a computer which smelled bad, apparently because it previously belonged to a heavy smoker. (That ain't what I remember we used to call '80'.) "But my (presumed) relative, undaunted, 'used a spray substance which kills smells in gym clothes' and '...managed to get the computer and discs aired out.'

"Spray substance? Aired out? Gimme a break! What was that *substance*--something so evil or vile or illegal that

it couldn't be identified? Would YOU spray a *SUBSTANCE* on a computer without knowing what it was? If it's strong enough to kill smells in gym clothes, I wouldn't want to get any on me, much less on my computer. I'd stay clear of the sprayed gym clothes, too. And since when does 'air out' apply to anything else than those shoes with a little built-in pump--as in 'Pump up and air out!'

"I think I'd be more worried about physical damage to the workings of the computer--and those diskettes--from smoke particles and other smoking by-products. Hasn't everyone seen those pictures showing the size of a smoke particle compared with the dimensions in disc drives? I mean that smoky aroma exists for several reasons: to entice new smokers to aquire the habit, to help me remember why I quit, and to alert us that this computer has been subjected to a nasty environment for a long time. If tobacco tar is carcinogenic, I suspect it's also corrosion-o-genic. Do you think \$500 (what Marte Brengle purportedly paid) for a tobacco-odor-permeated Toshiba T1000 with 'plenty of trimmings' is a bargain?! Me neither.

"I guess I'm just being hyper-critical, because after the pleasant surprise of finding my family name mentioned prominently in print--and in the same sentence with a high-profile athlete--I was disappointed that it was ensconced in such flakey writing, and questionable bargain hunting."

[Note: Author Al Brengle is SDHUG's Officer At Large. -- ed]

The SEBHC JOURNAL's Back Page

Society and Journal Policies

* The SEBHC JOURNAL is published once a month and strives to be mailed by the 20th of a month--sometimes we make it! Advt deadline, 10th of each month, holidays & A.O.G. permitting.

* Subscriptions: \$24.00/year in Canada, Mexico, USA and its' possessions. All subscriptions are mailed FIRST CLASS. Subscriptions start the month following order receipt. PLEASE MAKE CHEQUES or MONEY ORDERS PAYABLE TO L E GEISLER, NOT "the JOURNAL" or "SEBHC". Current back-issue copies are available at \$2.50 each. See order blank for bound volume discounts.

* Subscribers are automatically Society of Eight-Bit Heath Computerists members. Member's subscription number and expiration are clearly printed on mailing labels. The three member classes are: REGULAR (voting H/Z 8-bit user) ADVERTISING (one vote/vendor) and ASSOCIATE (non-8-bit computerist, library, etc.). REGULAR members can hold any elective Society office. ASSOCIATE members cannot hold office or vote. The Society's official yearly meeting place and time is announced every July in the JOURNAL. Advance registration of US\$25 for each attendee no later than 30 July, please

* All advertising is printed Free Of Charge. Vendors: Please do submit your B&W "camera-ready" ad copy, 7" w x 9" h (1 page to an issue) no later than the 10th of month in which it's scheduled to appear. All Society members can run one new free 250-word (maximum) Unclassified Want Ad every month.

* All subscribers/members are urged to submit their H/Z-oriented computer articles on disc in standard ASCII format rather than as hard copy. If a word needs to be emphasised or italicised please insert these symbols PRECEEDING the word: [EMPH] for emphasise, [ITAL] for italics. We'll return your disc after copying it and will gladly copy any SEBHC JOURNAL software disc onto it. Note: We can't pay authors but we do extend their subscription another year for a published article.

* The SEBHC JOURNAL is composed, edited and published by L E Geisler at 895 Starwick Drive, Ann Arbor, MI 48105. Phone 313-662-0750, 9am - 6pm Eastern Time Zone, Mon thru Fri only. Other times (EMERGENCIES ONLY): 313-769-6052 (residence).

Serving H/Z 8-Bit Users Since 1986
